MORBIDITY AND HOSPITALIZATION DATA FOR INDIVIDUAL STATIONS	26

WEEKLY HEALTH REPORT

NATURE OF THE DATA

The data presented here are taken from the Statistical Health Reports, WD AGO 8-122, rendered weekly to the Office of The Surgeon General by every hospital and separate dispensary in the continental United States. Troops in transit and certain small detachments are not required to submit reports; for this and other reasons, total strength of reporting units has been consistently about 1 percent below the actual strength of the Army in this country. The mean strength shown for individual stations is that of Army personnel attached or assigned for medical care and does not include organizations not on the post but dependent on the station for hospitalization.

Because of the desirability of placing the information in circulation at the earliest possible time following its receipt, figures are in general shown herein as reported. Where there is some doubt as to the accuracy of the reported figures, their verification is requested, and the fact that they have been so questioned is indicated by the symbol (!).

MORBIDITY DATA

Admissions are reported only for cases admitted to a medical installation (either to hospital or quarters) and not returned to duty within the same day, except for certain cases carded for record only (chiefly venereal disease cases treated on duty status, and deaths which occurred before admission to hospital or quarters). Admissions designated as "injury" comprise all "new" traumatisms (i.e., morbid conditions due to external causes, including poisons taken internally, results of exposure to heat, cold and light, as well as various types of wounds not due to enemy action) other than battle casualties. Under present conditions there would not be any direct admissions in the continental United States properly classifiable as battle casualties. All cases other than those of injury or battle casualty are classified as "disease."

Admission rates are shown for all causes combined, for all diseases combined, for injuries and for a few specific diseases. These rates are presented on an annual basis to facilitate comparisons with corresponding rates in annual and monthly reports. Such annual rates of admission indicate the number of admissions per thousand mean strength which would occur over a year's time if the current week's experience continued for a year.

The report also shows the number of cases of the more common communicable and certain other diseases of special interest. It may be noted that under the term infectious hepatitis are included cases reported as jaundice and cholangitis. Appended is a list of cases reported for the rarer communicable and certain other diseases.

The average proportion of the daily strength of the command which is confined to hospital or quarters (mean number of non-effectives per thousand strength) is given in the summary table for the total United States and for each of the Service Commands. More significant is the estimated non-effective rate for personnel stationed in the United States shown in the chart on page 7.

The number of enlisted men discharged during the week on Certificates of Disability for Discharge (CDD) are shown for individual stations. These data should be distinguished from the figures for "honorable discharges for physical and mental disqualification" assembled by The Adjutant General's Office; the latter include discharges for inaptness in addition to CDD's and are tabulated on a somewhat different basis (e.g., the April data represent April discharges processed by the AGO during April and May plus discharges prior to April which were processed in May).

In making comparisons between Service Commands it should be borne in mind that morbidity rates naturally tend to be higher in those Service Commands which have a relatively large number of General Hospitals and Ports of Embarkation. The presence of sizeable numbers of troops not under the jurisdiction of a Service Command (e.g. casualties, task force troops, etc.) affects the interpretation of the data from the viewpoint of Command responsibility.

MORTALITY DATA

Recent studies indicate that the reporting of deaths on WD AGO 8-122 is incomplete, especially in the case of deaths from injury. The resulting understatement in the mortality rate from injury may be as much as 10 percent and occasionally even more, but the death rate from disease is not materially understated. Therefore in computing mortality rates from injury and from all causes on the basis of the corresponding numbers of deaths, as shown in this report, an appropriate adjustment for the underreporting of such deaths must be made.

STATIONS WITH HIGHEST MORBIDITY RATES

Included in the report is a table listing the stations (having strength of 5000 or over) with the highest morbidity rates from all causes, from all diseases combined, from injuries, and from a few specific diseases. Not infrequently, the excessively high rates of admission for all causes and for all diseases combined reported from reception centers reflect a large number of venereal disease cases among newly inducted men. Therefore, more significant of high morbidity from disease are the rates of admission for disease excluding venereal infections existing prior to induction, which rates are also shown in the table. It should also be noted that reception, redistribution, and separation centers frequently report relatively large numbers of admissions arising from routine physical examinations of large bodies of troops.

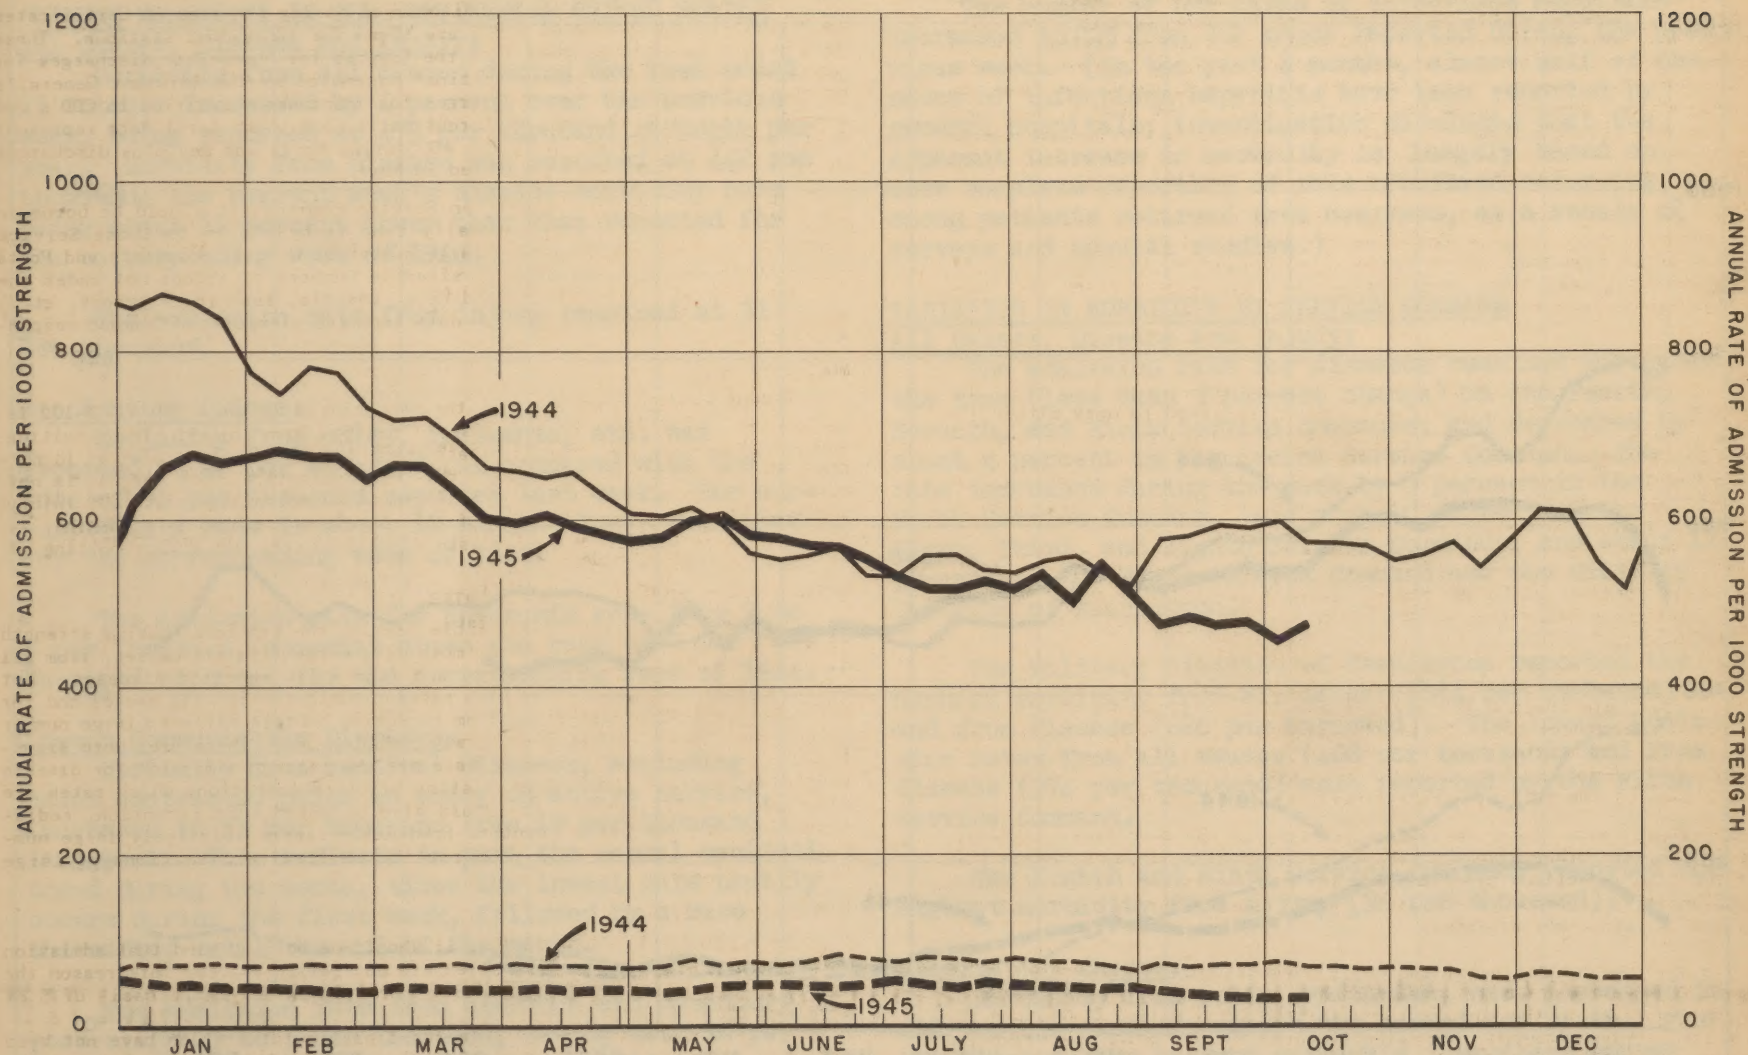

EXPLANATORY MATTER

In reading the detail tables, it should be born in mind that admission rates based on small numbers of cases are not reliable. For this reason the symbol (?) is placed after admission rates computed on the basis of 5 or fewer cases.

Where the current week's data for a particular station have not been received, the latest available figures are substituted therefor and the symbol (A) is placed after the name of the station.

CONTINENTAL UNITED STATES

COMMENT ON CURRENT TRENDS

CURRENT MORBIDITY IN THE CONTINENTAL UNITED STATESAll Causes, Disease and Injury:

Morbidity from all causes during the week ended 12 October increased by 4 percent over the previous week, being reported at 473 per thousand strength per year. Morbidity from disease was reported at 442 per thousand; the current week's disease morbidity rate being about 12 percent lower than that reported for the corresponding week of 1944.

The admission rate from injury remained at 31 per thousand.

Respiratory Causes:

Morbidity from colds, influenza, etc. was reported at 82 per thousand, as compared with the rate of 71 per thousand reported last week. The current week's rate is about 10 percent lower than that for the corresponding week of 1944.

The admission rate for pneumonia rose from 7 to 9 per thousand, somewhat above the rate of 7 per thousand reported for the corresponding week of 1944.

Common Communicable Diseases:

Morbidity from venereal diseases, excluding cases contracted prior to entry on active service, increased to 53 per thousand from 49 per thousand last week. This reflects in part the normal cyclical trend during the month, since the lowest rate usually occurs during the first week, followed by a rise thereafter until the end of the month.

The admission rate from diarrhea and dysentery rose slightly to 5 per thousand, having been 10 per thousand in the corresponding week of 1944.

The number of new cases of infectious hepatitis increased to 225 from 201 cases reported during the previous week. (In the past 4 months, almost half of the cases of infectious hepatitis have been reported by general hospitals; investigation discloses that the apparent increase in morbidity is largely based on more complete reporting of this condition occurring among patients returned from overseas, as a result of surveys and special studies.)

VARIATION IN MORBIDITY BY SERVICE COMMANDAll Causes, Disease and Injury:

The admission rate for diseases remained virtually the same (less than 3 percent change) in the Fourth, Seventh, and Ninth Service Commands; and decreased by about 4 percent in the Second Service Command. The rate increased during the week by 3 percent in the Fifth Service Command, less than 10 percent in the First, Third, and Eighth Service Commands, and about 12 percent in the Sixth Service Command and the Military District of Washington.

The Military District of Washington reported the highest morbidity from all causes (654 per thousand) and from disease (626 per thousand). The lowest admission rates from all causes (408 per thousand) and from disease (374 per thousand) were reported by the Fifth Service Command.

The Eighth and Ninth Service Commands reported the highest morbidity from injury (35 per thousand).

Respiratory Causes:

Morbidity from colds, influenza, etc. increased in all service commands except the Second and Sixth. The MDW reported the highest morbidity from these causes

COMMENT ON CURRENT TRENDS (CONT'D)

(154 per thousand), while the lowest was registered by the First Service Command (56 per thousand). All Service Commands except the MDW had rates under 95 per thousand.

Common Communicable Diseases:

Morbidity from venereal diseases, excluding EPTS cases, increased sharply in the First, Third, and Fifth Service Commands.

Morbidity from diarrhea and dysentery was relatively low, all service commands reporting rates of 6 per thousand or less.

NON-EFFECTIVE RATE:

The non-effective rate for personnel stationed in the continental United States is estimated at 28.6 per thousand strength for the week ended 12 October as compared with 34.3 per thousand for the corresponding week of 1944. The mean number of non-effectives in this country, including evacuees from overseas, decreased to 72.7 per thousand troops in this country.

PATIENTS REMAINING UNDER TREATMENT: 12 OCTOBER 1945:

The number of neuropsychiatric cases remaining was 23,159 or about 2000 fewer than at the end of the previous week. Non-battle injury patients remaining numbered about 39,500. The number of battle casualty patients remaining decreased by about 5100 to number 73,749.

CERTIFICATES OF DISABILITY FOR DISCHARGE:

In the week ended 12 October there were 12,007 enlisted personnel discharged by CDD, an increase of about 200 as compared with the previous week. Forty-four percent of these discharges were reported by general hospitals and 38 percent by convalescent hospitals. Among these CDD's were 2491 neuropsychiatric cases, a decrease of about 100 as compared with the previous week.

FORM SG-902 - 8 July 1944

RESTRICTED

ARMY SERVICE FORCES
OFFICE OF THE SURGEON GENERAL
MEDICAL STATISTICS DIVISION
HEALTH REPORTS BRANCH

WOMENS ARMY CORPS

During September special WAC reports were received from 51 selected stations which included most of the stations in the United States having a WAC strength of over 300. The WAC strength of the 51 reporting stations was 35 percent of the total WAC strength in the continental United States.

During the four week period ended 28 September the annual admission rate from all causes among WAC personnel at 51 selected stations decreased (by 1 percent) to 765 per year per thousand strength. The September admission rate from all causes for the WAC was 36 percent above that for the total Army in the continental United States, reflecting the well-known fact that morbidity among women is considerably higher than among men.

Morbidity from all causes during September varied appreciably by station, reflecting in large part the relatively small numbers of personnel at most of the reporting installations. The all causes admission rates in general ranged from 500 to 1200 per thousand. Fort Devens, Mass., Fort Bragg, N. C. and Fort Sam Houston, Texas were the only stations which reported rates in excess of 1800 per thousand (2347 per thousand, 1825 per thousand, and 2692 per thousand respectively).

The September admission rate from injuries for the WAC decreased to 28 per thousand as compared with 36 per thousand for the total Army in the United States.

Morbidity from colds, influenza, etc. decreased from 135 per thousand in August to 126 per thousand in September which was about 75 percent higher than the corresponding rate for the Army as a whole.

Morbidity from all forms of pneumonia was reported at 8 per thousand in September or the same as that reported for the Army as a whole.

Morbidity from diarrhea and dysentery for the WAC was reported at 10 per thousand, which is about 30 percent higher than the September rate for the total Army.

In Sept. neuropsychiatric disorders among the WAC accounted for an admission rate of 22 per thousand, a decrease of about 15 percent over the previous month.

The number of CDD's at the 51 selected WAC stations averaged about 13 per week during September as compared with a weekly average of about 18 during the six-month period of February through August.

WOMENS ARMY CORPS (CONT'D)

As of 28 September there were 620 WAC patients remaining in hospital and quarters at the 51 selected stations. In addition to the 582 WAC's remaining in hospital at the selected stations there were 1231 WAC's occupying beds in General Hospitals (exclusive of Tilton, Pickett and Walter Reed which are among the selected stations). The number of WAC's occupying beds at Station, Regional, and Convalescent Hospitals, exclusive of the 51 selected stations, was 883. Thus, the total number of WAC's occupying hospital beds as of the end of September was 2686.

The number of WAC's occupying hospital beds as of the end of September represented a rate of 37 per thousand strength of the WAC in the continental United States. For the total Army in the continental United States the corresponding figure was in the neighborhood of 24 per thousand when evacuees from overseas were excluded.
